

TASKS

1. FIGLET INVOCATION THROUGH UI

Below screenshot shows the request body passed while invoking the deployed figlet function accessible/called through openfaas gateway 127.0.0.1:8080 endpoint.

It shows the function output in response body .

2. FIGLET INVOCATION THROUGH CMD

Below screenshot shows the request data passed using echo and pipe while invoking the deployed figlet function via cmd, accessible/called through openfaas gateway 127.0.0.1:8080 endpoint.

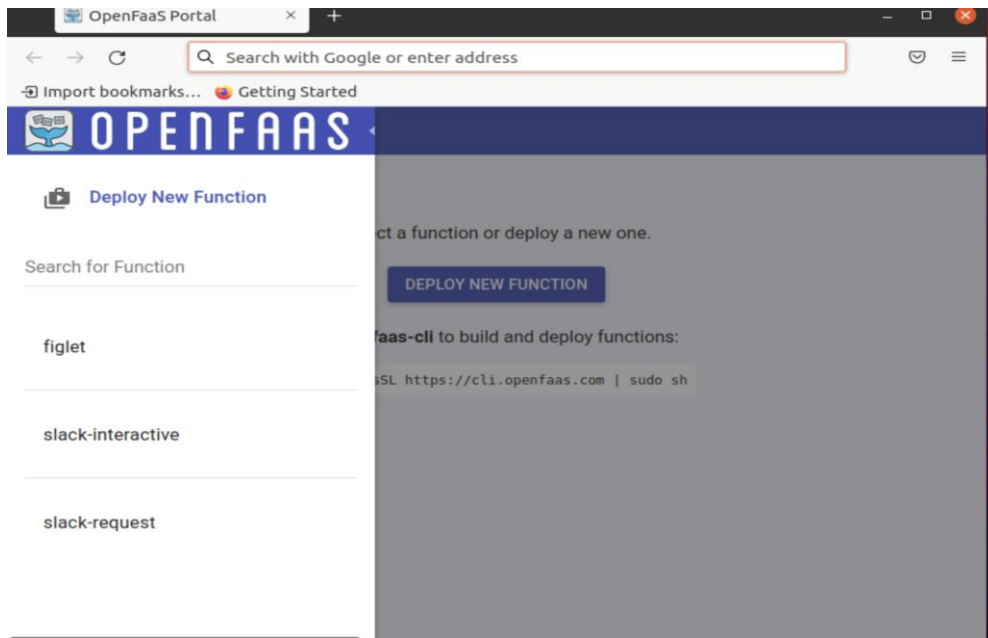

It shows the function output.

```
himani@himanifaas:~/faasd$ faas-cli store inspect figlet
info for: Figlet
name      figlet
description Generate ASCII logos with the figlet CLI
image     ghcr.io/openfaas/figlet:latest
process   figlet
repo URL  https://github.com/openfaas/store-functions

himani@himanifaas:~/faasd$ echo "hello himani" | faas-cli invoke figlet
hello himani
himani@himanifaas:~/faasd$ faas-cli invoke figlet
```

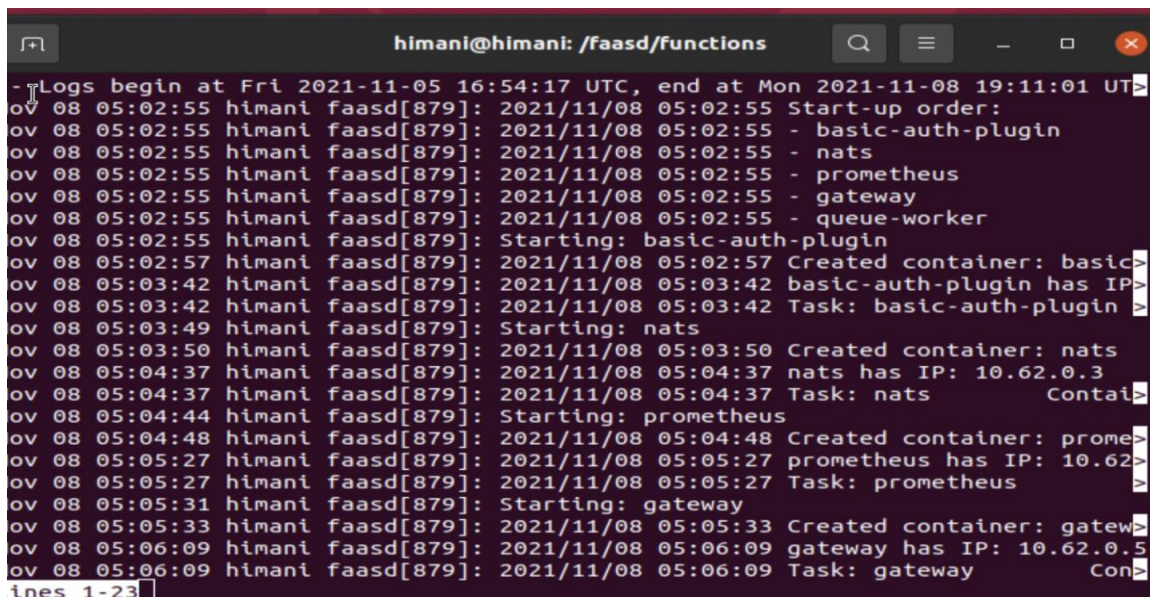

3. OPENFAAS GATEWAY AFTER DEPLOYING FIGLET/SLACK-INTERACTIVE/SLACK-REQUEST

Screenshot shows the deployed functions on docker registry which are accessible and called by end-user through openfaas gateway 127.0.0.1:8080 endpoint.

4. SCREENSHOT OF “sudo journalctl -u faasd –lines 40” command

Screenshot below is the log of openfaas process. Logs clearly shows starting of each background service(container) in openfaas infrastructure like NATS, PROMETHEUS, QUEUE-WORKER, GATEWAY, AUTHENTICATION PLUGIN when openfaas is installed and started.

```

Request body

{"req":"invoking function"}

QUESTIONS&ANSWERS

1. What is the command to invoke the slack-request function?

- a. Via Curl
- b. Via faas-cli

a. curl localhost:8080/function/slack-request -d "hello himani"

b. echo "hello himani" | sudo faas-cli invoke slack-request.

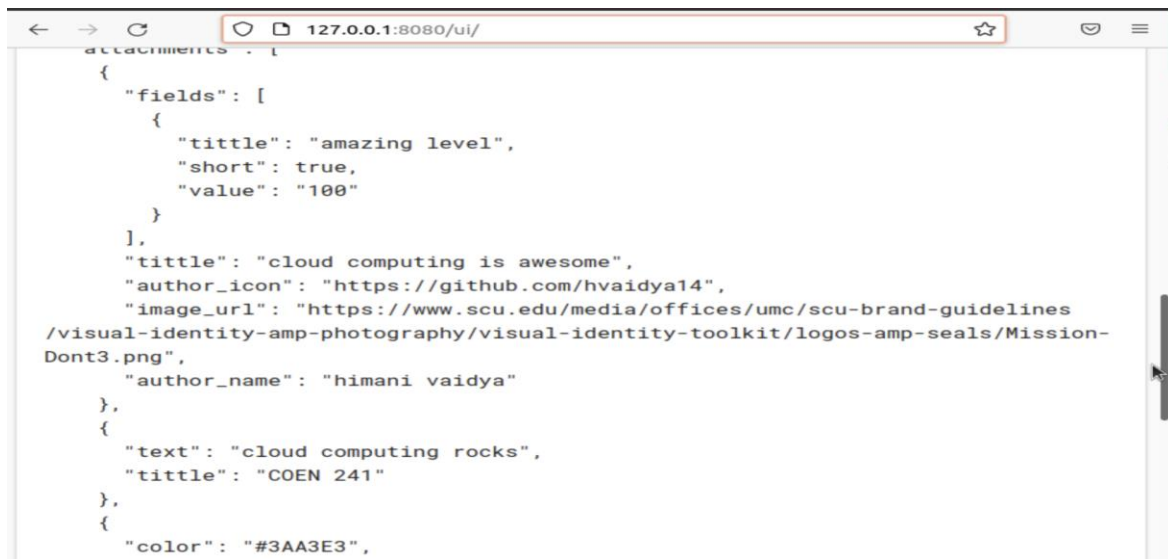

2. What is the output you see when you invoke the slack-request function?

Screenshot of slack-request invocation through cmd and UI accessible /called through openfaas gateway 127.0.0.1:8080 endpoint and its response.

```

hmani@hmani:~/faasd/functions$ echo "hmani vaidya" | sudo faas-cli invoke ./slack-request
{"text": "serverless message", "attachments": [{"fields": [{"title": "amazing level", "short": true, "value": "100"}], "title": "cloud computing is awesome", "author_icon": "https://github.com/hvaidya14", "image_url": "https://www.scu.edu/media/offices/uc/scu-brand-guidelines/visual-identity-and-photography/visual-identity-toolkit/logos-and-seals/Mission-Dont3.png", "author_name": "hmani vaidya", {"text": "cloud computing rocks", "title": "COEN 241", {"color": "#3AA3E3", "actions": [{"text": "of course", "type": "button", "name": "recommend", "value": "recommend"}, {"text": "most definitely", "type": "button", "name": "definitely", "value": "definitely"}], "attachment_type": "default", "callback_id": "response123", "fallback": "i would recommend coen 41 to my friends", "title": "coen 241 subject"}]}

```

3. What is the command to invoke the slack-interactive function?

- a. Via curl
- b. Via faas-cli

a. curl localhost:8080/function/slack-interactive --data-binary '{"name": "slack-interactive function"}'

b. echo '{"name": "slack-interactive"}' | sudo faas-cli invoke slack-interactive

4. What is the output you see when you invoke the slack-interactive function?

Screenshot of slack-interactive invocation through cmd and UI accessible/called through openfaas gateway 127.0.0.1:8080 endpoint and its response

```

himani@himani:/faasd/functions$ echo 'payload={\"hello\": \"cloud\"}' | faas-cli invoke slack-interactive

```

5. How would you pass different arguments to the functions

Different ways are as follows:-

Using -d or --data-binary option in curl command

- a. `curl localhost:8080/function/slack-interactive --data-binary '{"name": "slack-interactive function"}'`
- b. `curl localhost:8080/function/slack-request -d "hello himani"`

Using echo command and data to be passed enclosed in single or double quotes and pipe in command

- a. `echo '{"name": "slack-interactive"}' | sudo faas-cli invoke slack-interactive`
- b. `echo "hello himani" | sudo faas-cli invoke slack-request.`

6. How would you change the slack-interactive function to react to different inputs?

Screenshot of code change to react to different inputs/request body passed to function.

We are parsing the key from json string passed as request to function and assigning its value to one of the key:value pair here it is "request" key in attachments json object.

```
def handle(req):
    """handle a request to the function
    Args:
        req (str): request body
    """
    urlstring = urllib.unquote(req).decode('utf8').strip('payload=')
    response = json.loads(urlstring)
    keys = response.keys()
    for new_key in keys:
        key = new_key
    data = {
        "attachments": [
            {
                "request": response[key],
                "replace_original": True,
                "response_type": "ephemeral",
                "fallback": "Required plain-text summary of the attachment.",
                "color": "#36a64f",
                "pretext": "COEN 241 is amazing!!",
                "author_name": "himani vaidya",
            }
        ]
    }
```

"slack-interactive/handler.py" 39L, 1680C 13,8 Top

Screenshot of slack-interactive invocation from cmd and response

It can be seen in response that request body passed to function is parsed and value of its json string key "name" is assigned to key-value pair "request" here of json object "attachments" here. Value assigned is slack-interactive which is same as passed to request body using echo and pipe in cmd.

```
himani@himani:/faasd/functions$ echo '{"name":"slackinteractive"}' | sudo faas-c
li invoke slack-interactive
